RE: WATER QUALITY REPORTS

The 1996 amendments to the Safe Drinking Water Act require that all public water suppliers with more than fifteen (15) service connections provide their customers with a report that summarizes the water quality information that has been accumulated for the system.

In response, the Columbus City Utilities has prepared its annual Water Quality Report and is in the process of distributing it to its customers. Monthly bills mailed in June will contain the report, and additional copies will be distributed to apartment complexes and other multiple user accounts.

The Columbus City Utilities is very pleased to report that no element or compound has ever been detected in its water supply at any level deemed potentially harmful by the Environmental Protection Agency.

Additional copies of the report are available at the Columbus City Utilities offices located at 1111 McClure Road.
